[Important symbols for good services]
In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely.
When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount.For replacement parts or tools, the prescribed ones should be used.

● Service Precautions

1. For pickup unit(CXX1305) handling, please refer to"Disassembly"(see page 109).
   During replacement, handling precautions shall be taken to prevent an electrostatic discharge(protection by a short pin).
2. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.
3. Please checking the grating after changing the service pickup unit(see page 93).
4. You can't recover the data if the HDD should break for some reason.
5. Be careful to handle HDDs (as HDD navigation systems).
6. An external power supply box is used along with the unit. Customers may consult their dealers without bringing the box.
7. You can't play your data with any HDD or product other than the original one, because each product has its ID (CXK2000EN) for protecting copyrights. Please use both of the ID and the data in the HDD as paired with each other. (For example, if you exchange the digital units because your unit has defects, remove IC3305: CXK2000EN from the defective unit and install it in the new unit for use.)

1. SAFETY INFORMATION

UC

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer.
Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty.
If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.
Health & Safety Code Section 25249.6 - Proposition 65

EW

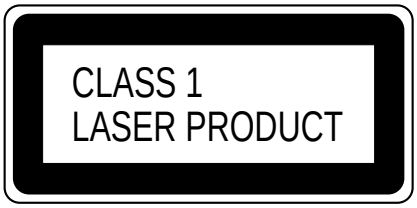
1. Safety Precautions for those who Service this Unit.

- **When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.**

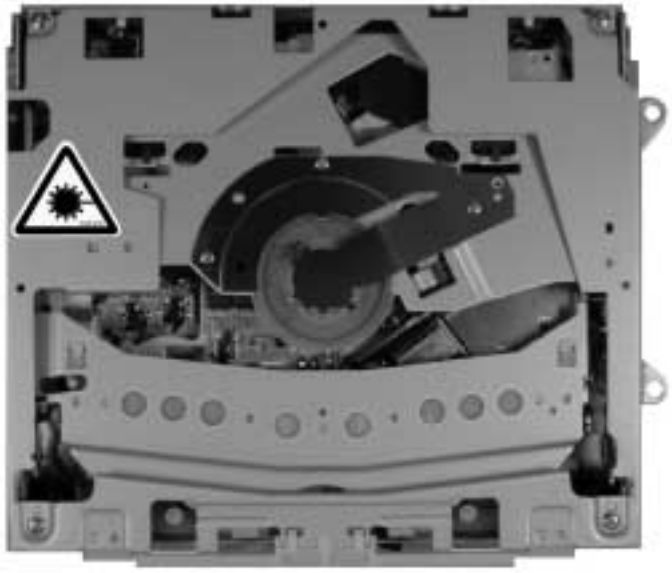
Caution:

1. During repair or tests, minimum distance of 13cm from the focus lens must be kept.
2. During repair or tests, do not view laser beam for 10 seconds or longer.

2. A "CLASS 1 LASER PRODUCT" label is affixed to the bottom of the player.



3. The triangular label is attached to the mechanism unit frame.



4. Specifications of Laser Diode

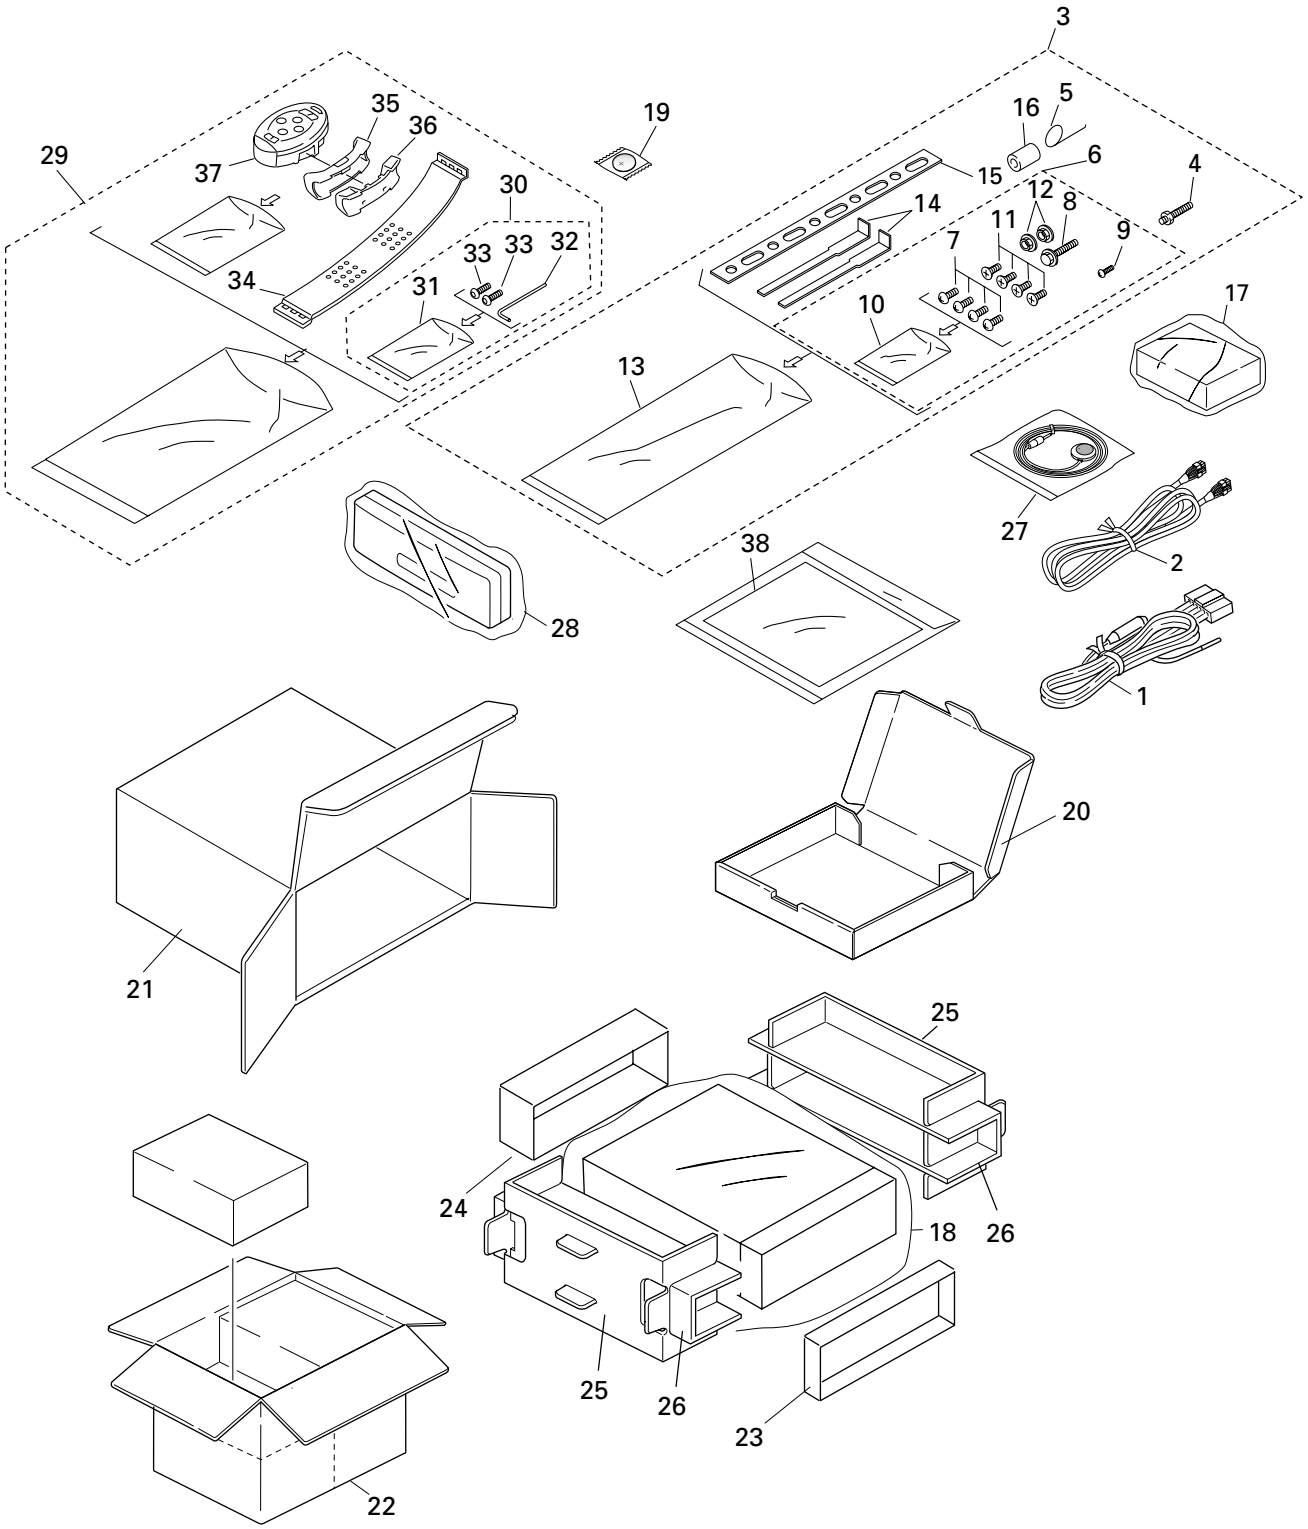
Specifications of laser radiation fields to which human access is possible during service.
Wavelength = 800 nanometers

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replaced only with the same or equivalent type recommended by the manufacture.
Discord used batteries according to the manufacture's instructions.

2. EXPLODED VIEWS AND PARTS LIST

2.1 PACKING(DEH-P90HDD/UC)



NOTE:

- Parts marked by "*" are generally unavailable because they are not in our Master Spare Parts List.
- Screws adjacent to ∇ mark on the product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual.
  (In the case of no amount instructions, apply as you think it appropriate.)

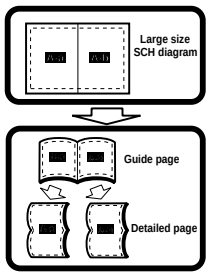
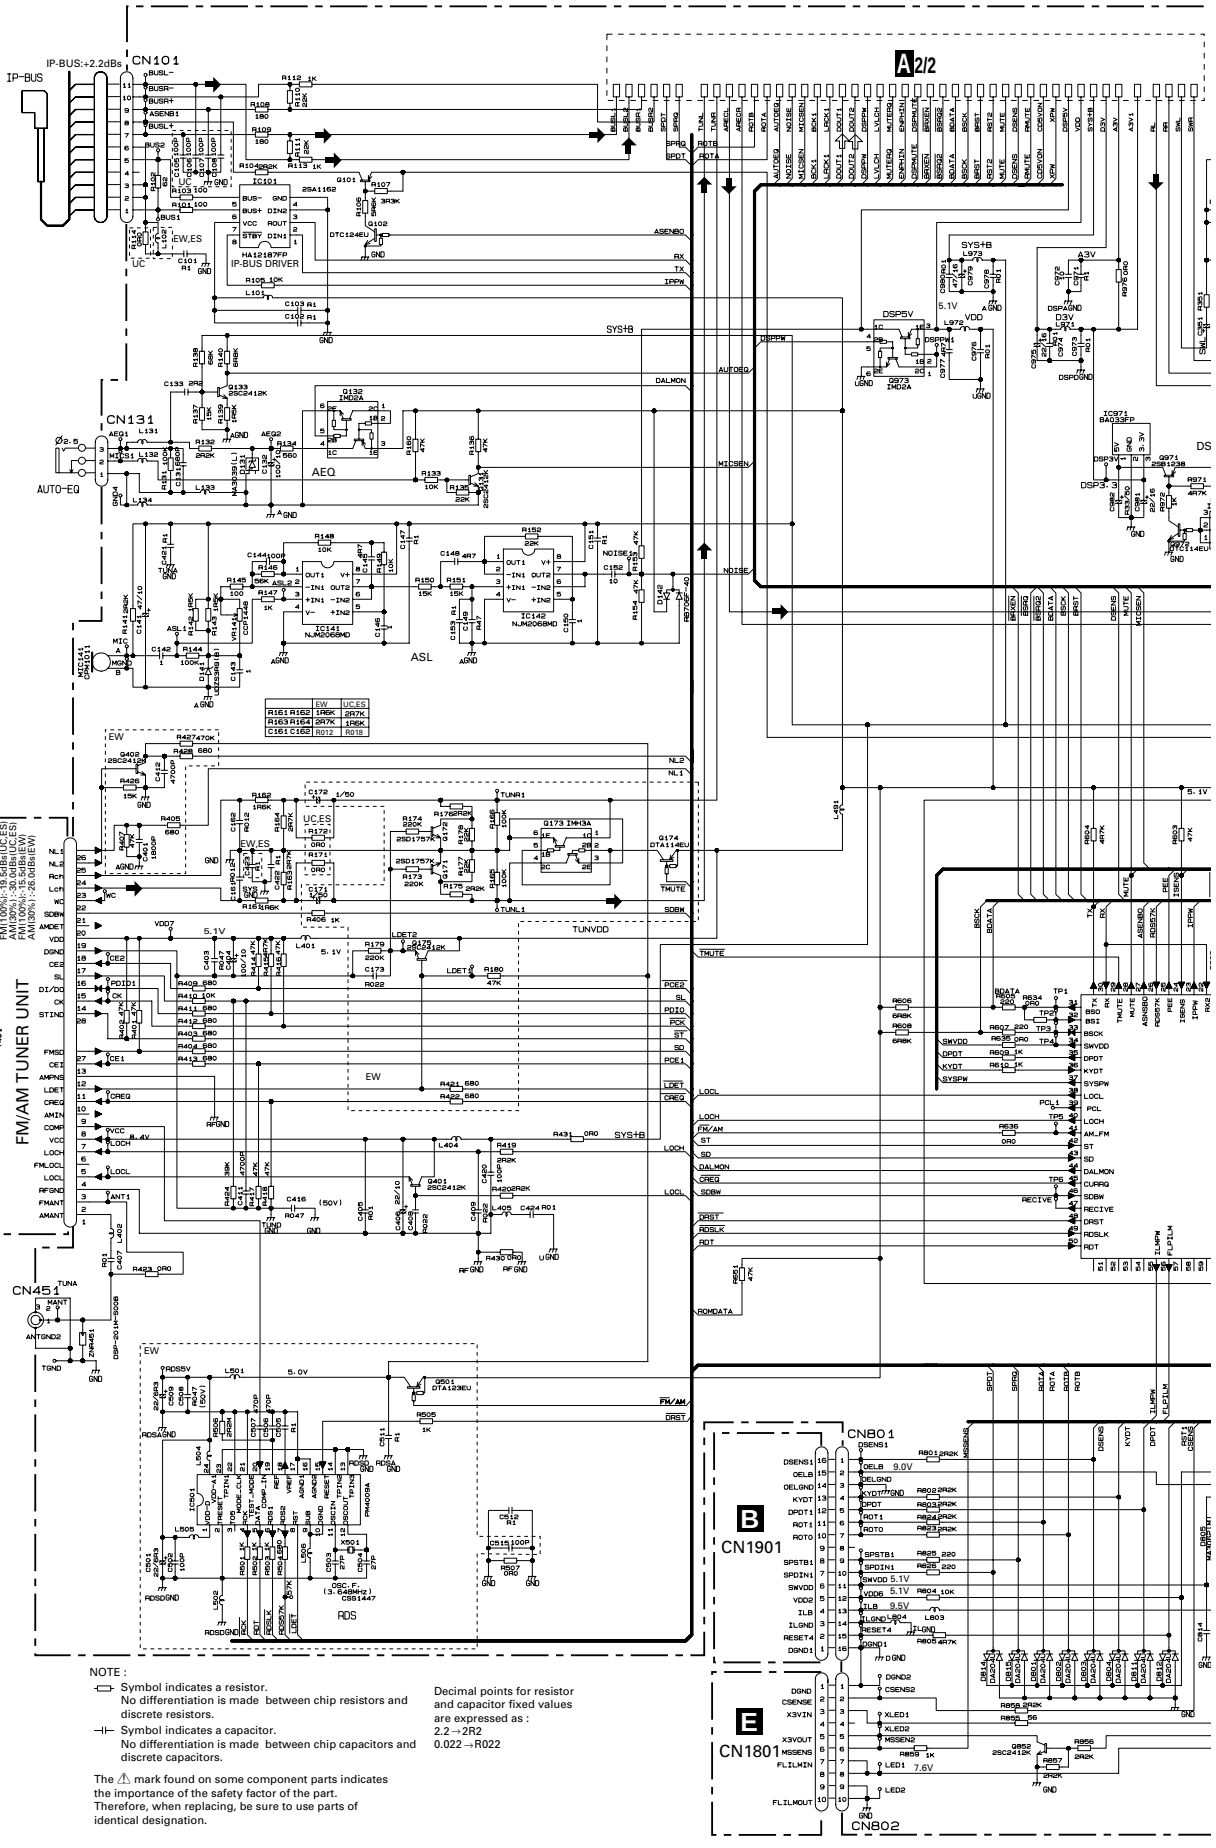
Note: When ordering service parts, be sure to refer to "EXPLODED VIEWS AND PARTS LIST" or "ELECTRICAL PARTS LIST".





NOTE :

- Symbol indicates a resistor. No differentiation is made between chip resistors and discrete resistors.
- Symbol indicates a capacitor. No differentiation is made between chip capacitors and discrete capacitors.

The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

Decimal points for resistor and capacitor fixed values are expressed as :
2.2→2R2
0.022→R022

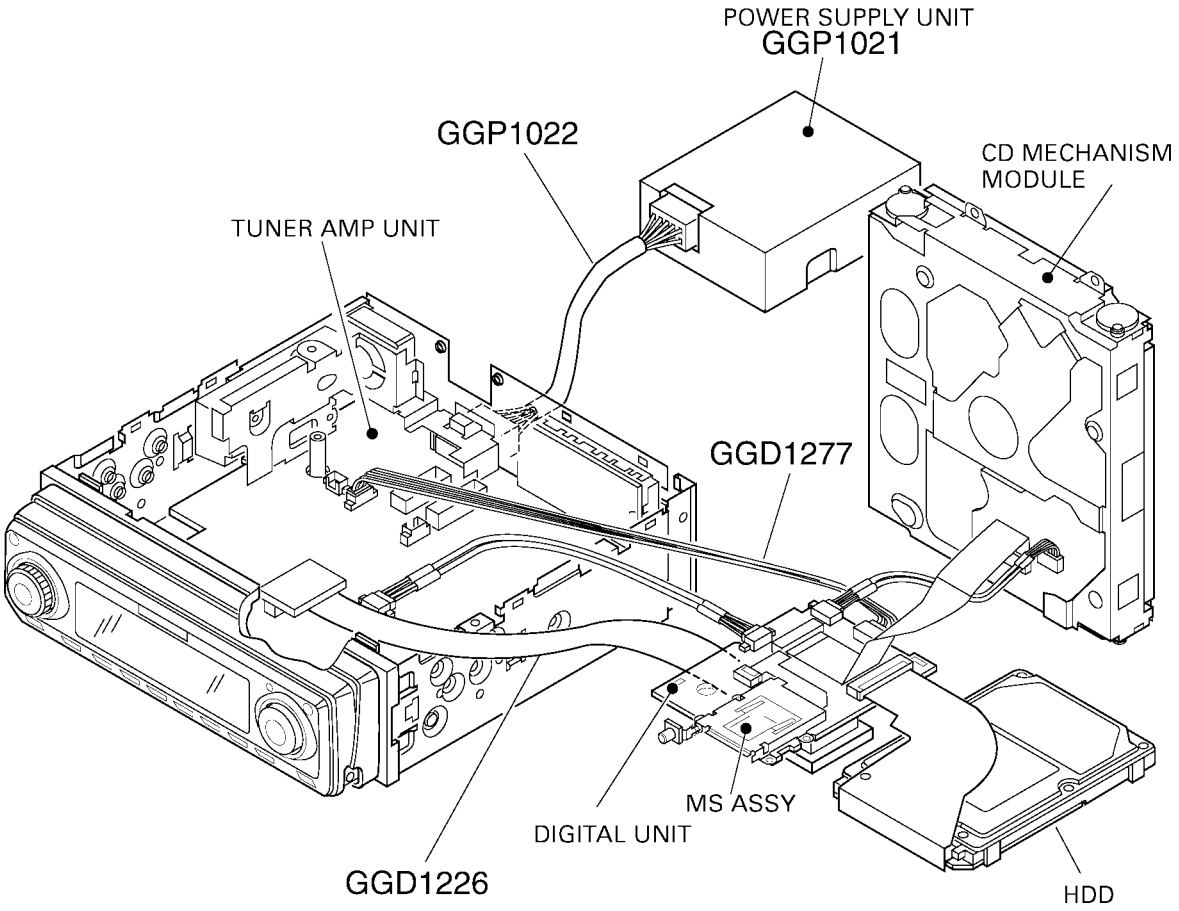
6. ADJUSTMENT

6.1 CONNECTION DIAGRAM



6.2 CD ADJUSTMENT

1) Precautions

- This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to VREF(approx. 2.1V) instead of GND.
  If VREF and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.
  Do not connect the negative probe of the measuring equipment to VREF and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to VREF with the channel 2 negative probe connected to GND.
  Since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status.
  If by accident VREF comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.

- Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.

- Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and /or electrical shocks to the system when making adjustment.

- The RFI and RFO signals are easy to oscillate because of a wide band. When observing them, insert a resistor of about 1 kΩ to the series.

- This equipment will not guarantee the load ejection operation when the mechanical unit is turned upside down. In particular, if the ejection operation is incorrectly performed and recovery is disabled, the recovery is enabled by resetting a product or turning ACC off to on.

2) Test Mode

This mode is used for adjusting the CD mechanism module of the device.

- Test mode starting procedure
  Reset while pressing the **DISP** and ► keys together.

- Test mode cancellation
  Switch ACC, back-up OFF.

- After pressing the EJECT key, do not press any other key until the disk is completely ejected.

- If the ► or ◄ key is pressed while focus search is in progress, immediately turn the power off (otherwise the actuator may be damaged due to adhesion of the lenses).

- Jump operation of TRs other than 100TR continues after releasing the key. CRG move and 100TR jump operations are brought into the “Tracking close” status when the key is released.

- Powering Off/On resets the jump mode to “1TR”, the RF AMP gain setting to TYP, and the automatic adjustment value to the initial value.

- Please use the "remote control unit of the product accessory" after the test mode starts.

6.3 CHECKING THE GRATING AFTER CHANGING THE PICKUP UNIT

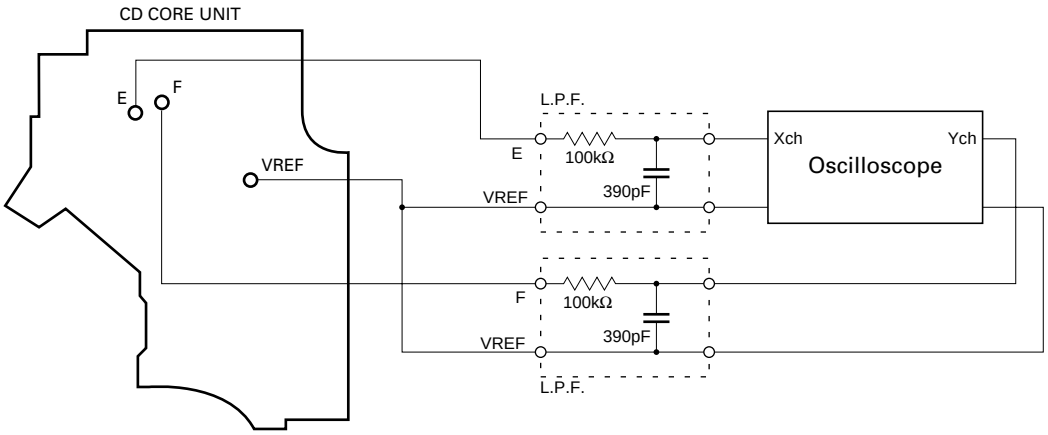
• **Note :**
The grating angle of the PU unit cannot be adjusted after the PU unit is changed. The PU unit in the CD mechanism module is adjusted on the production line to match the CD mechanism module and is thus the best adjusted PU unit for the CD mechanism module. Changing the PU unit is thus best considered as a last resort. However, if the PU unit must be changed, the grating should be checked using the procedure below.

• **Purpose :**
To check that the grating is within an acceptable range when the PU unit is changed.

• **Symptoms of Mal-adjustment :**
If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or taking a long time for track searching.

• **Method :**

• Measuring Equipment	• Oscilloscope, Two L.P.F.
• Measuring Points	• E, F, VREF
• Disc	• ABEX TCD-784
• Mode	• TEST MODE



• **Checking Procedure**
1. In test mode, load the disc and switch the 5V regulator on.
2. Using the ► and ◄ buttons, move the PU unit to the innermost track.
3. Press key **3** to close focus, the display should read "91". Press key **2** to implement the tracking balance adjustment the display should now read "81". Press key **3**. The display will change, returning to "81" on the fourth press.
4. As shown in the diagram above, monitor the LPF outputs using the oscilloscope and check that the phase difference is within 75° . Refer to the photographs supplied to determine the phase angle.
5. If the phase difference is determined to be greater than 75° try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75° then the mechanism should be judged to be at fault.

• **Note**
Because of eccentricity in the disc and a slight misalignment of the clamping center the grating waveform may be seen to "wobble" (the phase difference changes as the disc rotates). The angle specified above indicates the average angle.

• **Hint**
Reloading the disc changes the clamp position and may decrease the "wobble".

6.4 TEST MODE(CD)

● CD Section Error No. Display

If the CD player cannot operate or if it stops when an error occurred in operation, it enters the error mode and displays the cause of the error in numerals. Accordingly, an object of this display is to assist in analysis and repair.

(1) Display example

Err XX

(2) Error codes

Error code	Type	Description	Details and cause
10	Mechanical unit	Carriage Home NG	Carriage cannot move to and from the inside circumference. → Defective Home SW, Carriage move error.
11	Electricity	Focus Search NG	Focus is disabled. → At the rear of disc. Disc damage, dirt and vibration are intense.
12	Electricity	Spindle Lock NG	Spindle Lock is not performed and no subcode can be read. → Defective spindle. Disc damage, dirt and vibration are intense.
14	Electricity	Mirror NG	CD-R to which data is not written. (At the rear of disc on rare occasions)
17	Electricity	Setup NG	AGC protection does not work. Focus immediately slips off. → Disc damage, dirt and vibration are intense.
19	Electricity	Setup NG	The tracking balance deviation is 50% or higher or the tracking error level is low. → The pickup or tracking error circuit is abnormal.
30	Electricity	Search Timeout	Could not reach the target address. → Carriage/tracking error, disc damage.
A0	System	Power Supply NG	Higher or lower than the specified voltage, or no power is output. → Defective SW transistor, power supply abnormality, load terminal NG.

* Setup indicates a series of operations until sound is issued after focus has been performed.

● CD Section Test Mode (Aging Operation and Setup Analysis)

Play is performed in the CD normal mode. However, after setup, in the protection operation, such as FOK (focus), LOCK (spindle), subcodes. sound skip and mechanical-unit errors, the error occurrence and a timeout, the occurrence cause and occurrence time are displayed. During setup, the operation status (internal RAM; CPOINT) of the CD software is displayed.

(1) Entering the new test mode

See the test mode flowchart on Page 92.

(2) Correspondence of keys between the test mode and new test mode

Key	Test mode		New test mode	
	Regulator OFF	Regulator ON	In-play	Error or protection occurrence
BAND	Regulator ON	Regulator OFF	—	Error occurrence time or error cause switching

1	—	TRACKING CLOSE	SCAN	—
2	—	TRACKING OPEN	MODE	—
3	—	FOCUS CLOSE	(ITP)	—
6	To new test mode	FOCUS MODE SWITCHING	AUTO/MANUAL	—

The conventional operation is performed for EJECT or CD ON/OFF.

(3) Error cause (error No.) codes

Error code	Type	Mode	Description	Details and cause
40	Electricity	PLAY	FOK=L 100mS	Focus slips off. → Damage, dirt, vibration and faulty servomechanism.
41	Electricity	PLAY	LOCK=L 100mS	Spindle Lock slips off. → Damage, dirt, vibration and faulty servomechanism.
42	Electricity	PLAY	Subcode NG 500mS	No subcode can be read. → Damage, dirt, vibration and faulty servomechanism.
43	Electricity	PLAY	Sound skip occurrence	Last address memory operation. → Damage, dirt, vibration and faulty servomechanism.

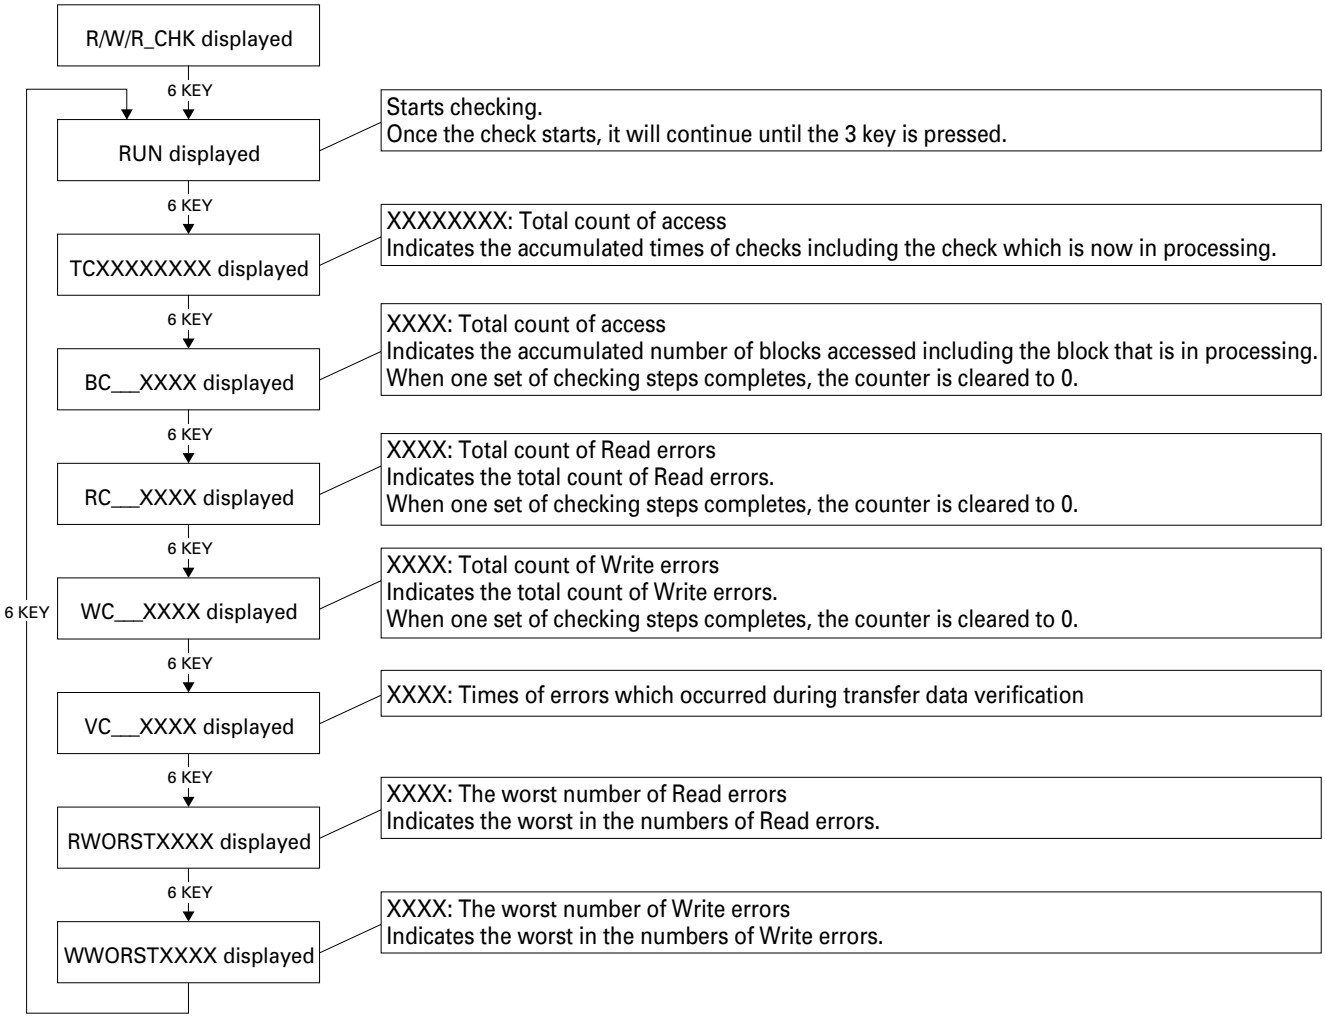
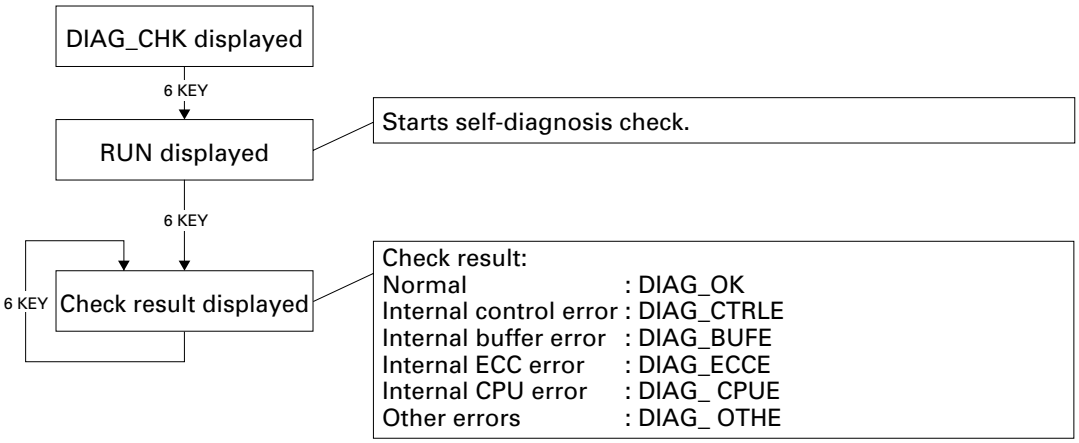
③ R/W/R_CHK menu: HDD Read/Write/Read verification check

This menu repeats and checks one operation block of Read access (before Write), Write access, and Read verification access (after Write) 10,000 times during one set of checking steps. These operations mean a total of 5 Mbytes data transfer.
* The displayed values are expressed in hexadecimal number system.



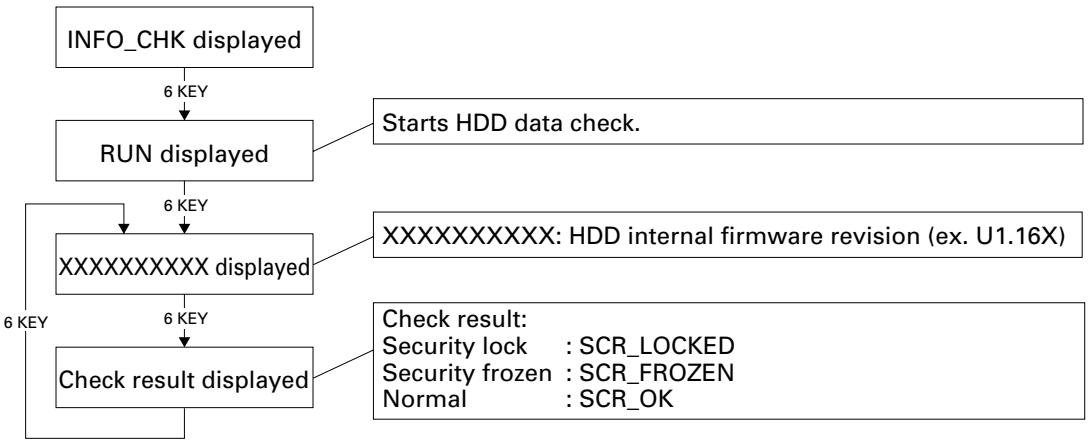
④ DIAG_CHK menu: HDD self-diagnosis check

This menu sends ATA Diagnostics command to the HDD to operate its internal functions (internal ROM/RAM check and control LSI register check), and obtains the results of self-diagnosis checks.



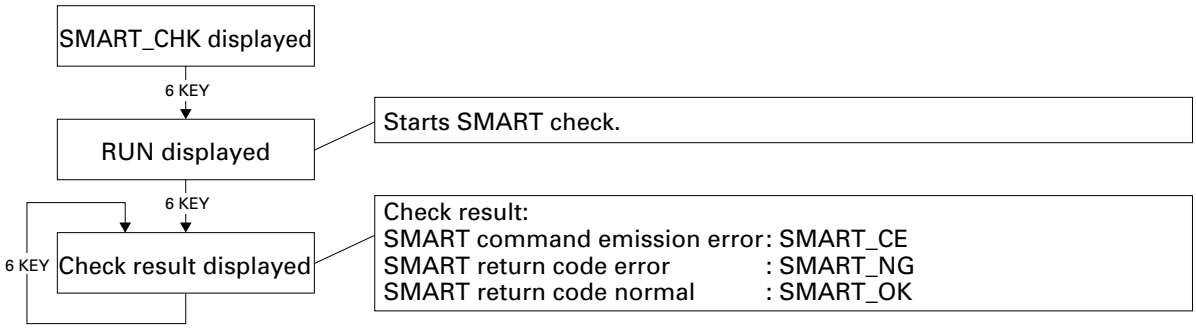
⑤ INFO_CHK menu: HDD information

This menu sends ATA Identify command to the HDD to obtain the HDD data (HDD firmware revision and security lock status check results).



⑥ SMART_CHK menu: HDD SMART command check

Using ATA SMART Return Status command, this menu monitors the inside of the HDD, and predicts HDD errors and/or problems that may occur to notify.
This SMART function is not available in the normal operation mode but in the test mode menu.



⑦ TEMP_CHK menu: HDD temperature measurement

This menu measures the temperature inside the HDD by using Toshiba HDD vender unique command.

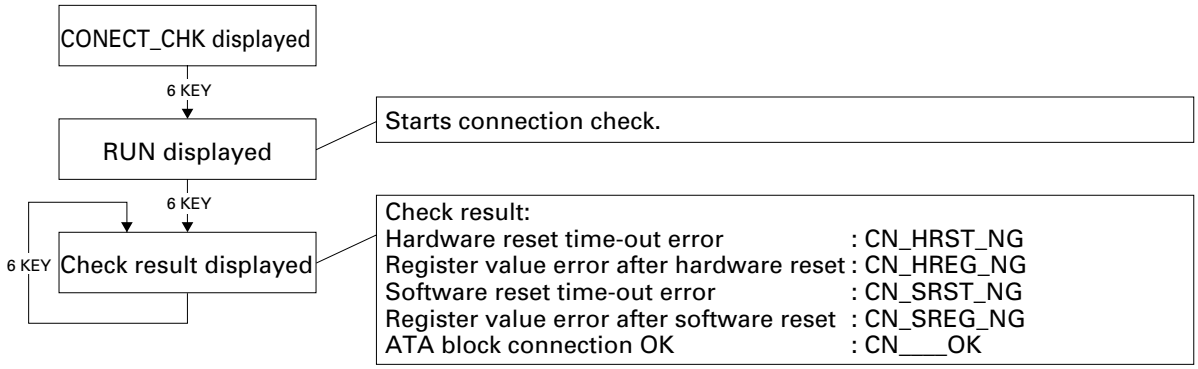
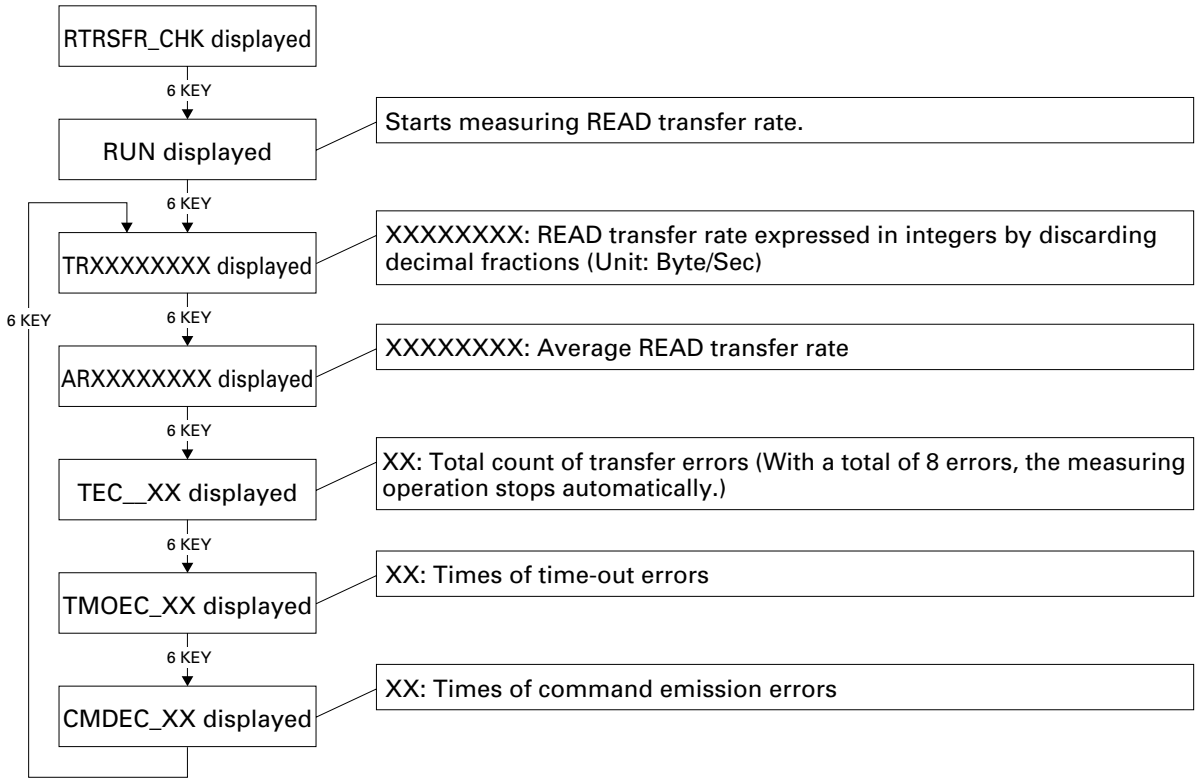
⑧ CONECT_CHK menu: HDD block connection check

This menu sends the hardware reset command or the software reset command to the HDD block, and obtains the result status from the HDD block.
These two checks make it possible to verify the connections of IDE connectors.
When xx_xxxx_NG is displayed as check result, there may be poor connection at either of the HDD data, address and control terminals.



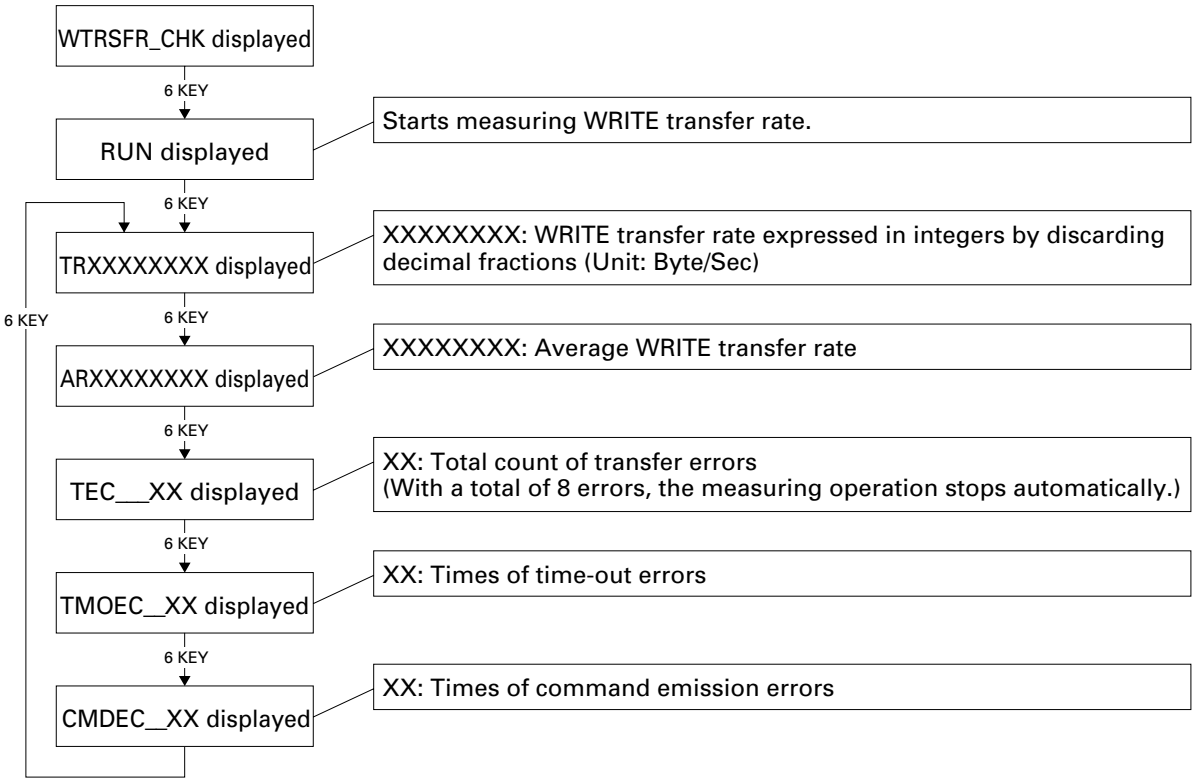
⑨ RTRSFR_CHK menu: HDD READ transfer rate check

This menu measures the READ data transfer rate by 16kByte.
At internals of three seconds, READ operation is performed repeatedly.
* The displayed values are expressed in hexadecimal number system.



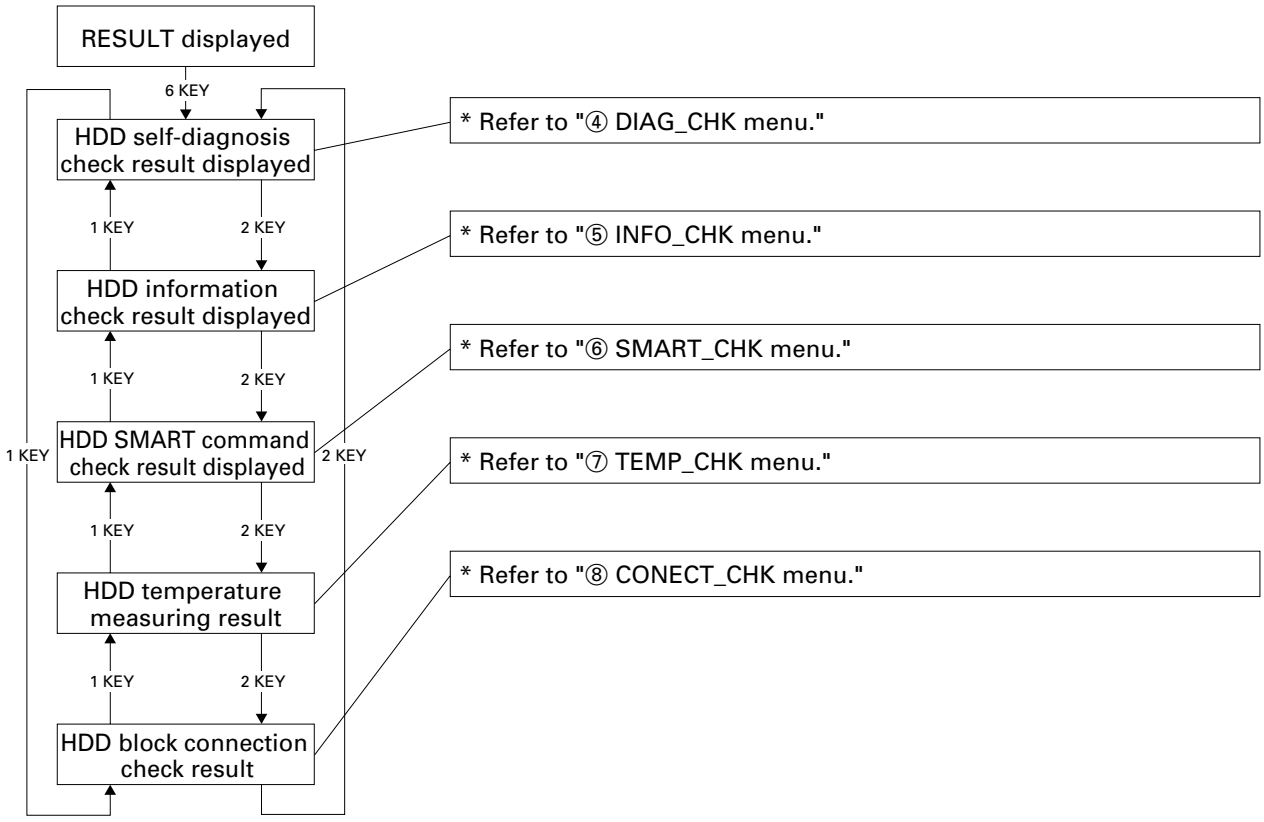
⑩ WTRSFR_CHK menu: HDD WRITE transfer rate check

This menu measures the WRITE data transfer rate by 16kByte.
At internals of three seconds, WRITE operation is performed repeatedly.
* The displayed values are expressed in hexadecimal number system.



⑪ RESULT menu: HDD test result status

This menu verifies and summarizes the check results from the DIAG_CHK, INFO_CHK, SMART_CHK, TEMP_CHK, and CONECT_CHK menus in the test mode.



● Error numbers with HDD

● **Removing the Case (not shown)**

1. Remove the three screws and then Case.

● **Removing the CD Mechanism Module (Fig.1)**

1 Remove the four screws.

Disconnect the connector and then remove the CD Mechanism Module.

(CAUTION)When reassembling the CD Mechanism Module, be sure to insert the black side of the FLEXIBLE PCB into the side of the CD Mechanism Module.

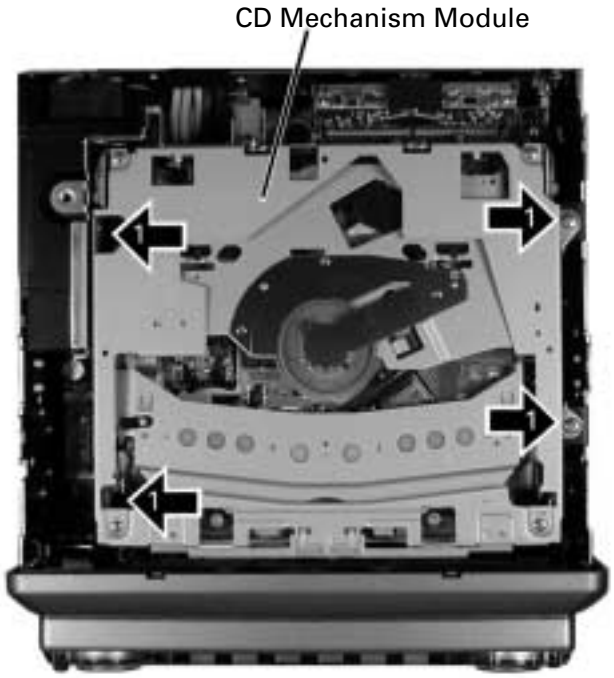

Fig.1

● **Removing the HDD (Fig.2)**

1 Remove the four screws.

Disconnect the connector and then remove the HDD.

(CAUTION)When fixing the HDD section to the lower case (CNC9348) with screws (BMZ30P040FMC), do not use an electric screwdriver.

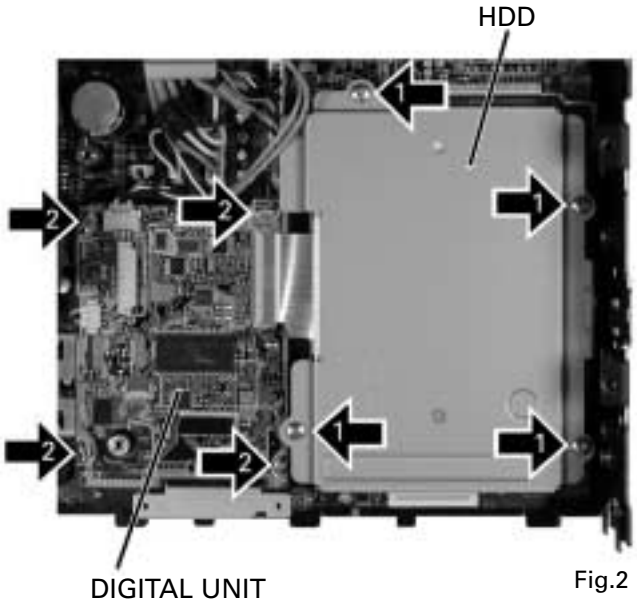

Fig.2

● **Removing the Panel Assy (Fig.3)**

1 Remove the two screws.

2 Remove the two screws.

3 Remove the three screws.

Remove every connector, then remove two tabs on the both sides and three tabs on the bottom, then pull the Panel Assy.

(CAUTION)When reassembling the Panel Assy, insert the FLEXIBLE PCB at the right side in the picture, then bend it inward.

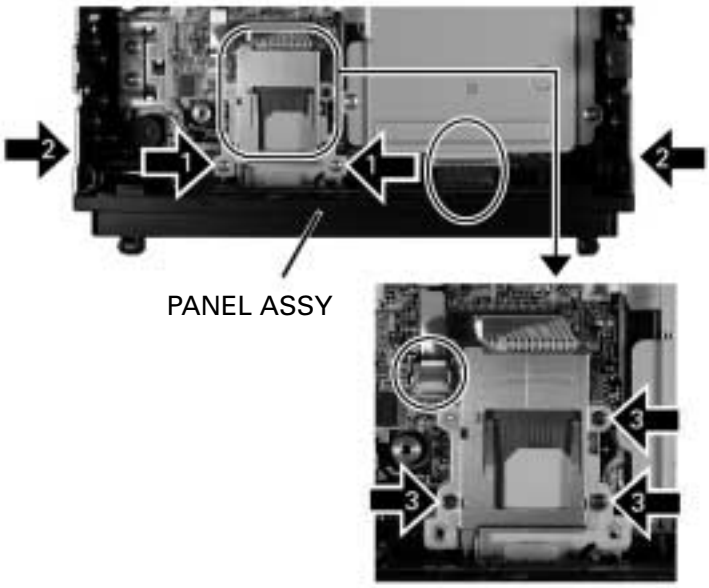

Fig.3

● **Removing the Digital Unit (Fig.2)**

2 Straight the tabs at four locations indicated.

Disconnect the connector and then remove the Digital Unit.

● **Removing the Tuner Amp Unit (Fig.4)**

1 Remove the screw.

2 Remove the two screws.

3 Straight the tabs at three locations indicated.

4 Remove the three screws.

5 Remove the two screws and then remove the Tuner Amp Unit.

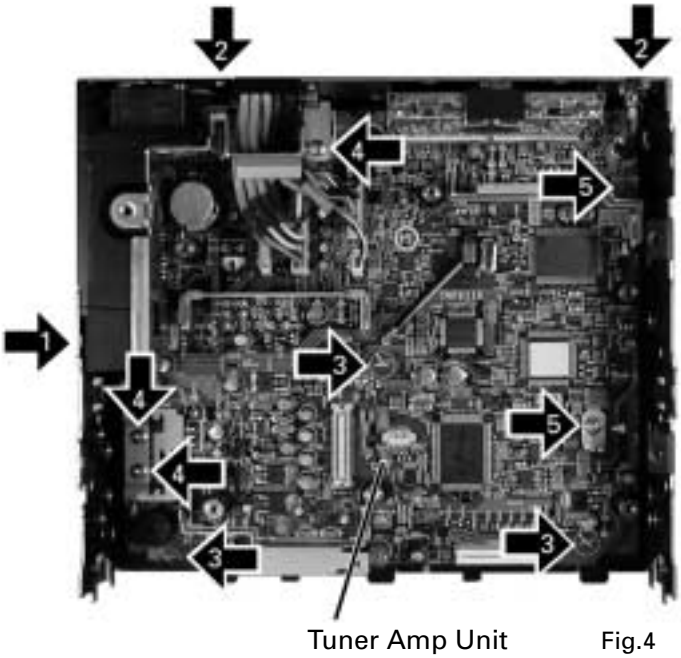

Fig.4

● **Removing the Power Supply Unit (Fig.5)**

Remove the two screws and then remove the Case.

1 Remove the three screws.

2 Straight the tabs at two locations indicated and then remove the Power Supply Unit.

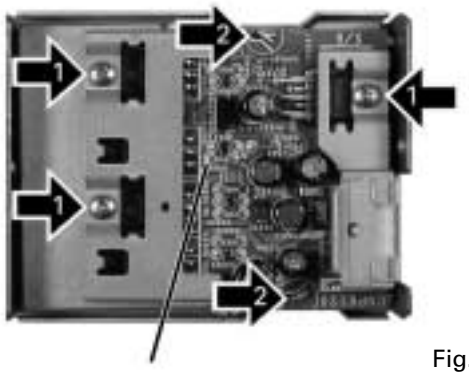

Fig.5

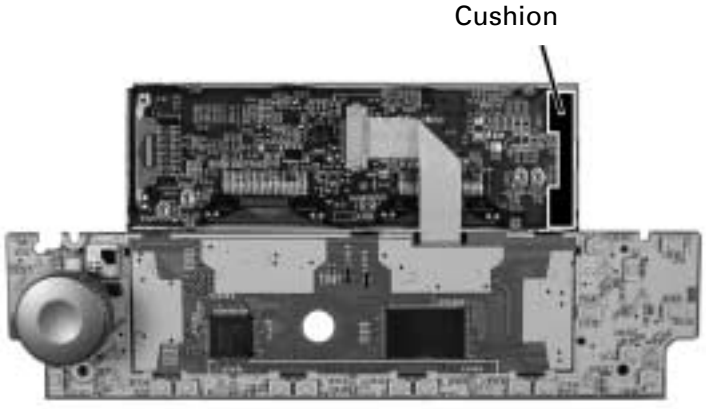
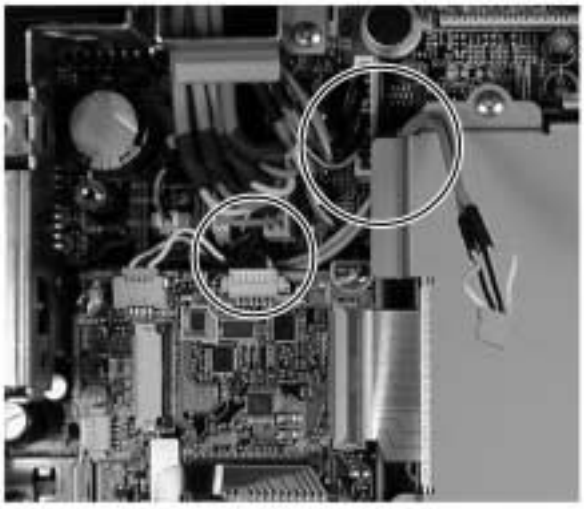
● **CAUTION on disassembling the unit**

Do not force anything to pieces because the OEL module and the keyboard unit adhere to each other with a Cushion.



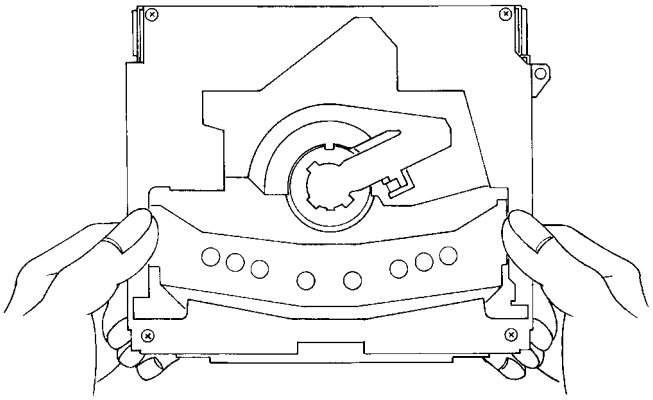
● **CAUTION on reassembling the unit**

When reassembling the CD Mechanism Module, arrange the cords as shown in the picture.



When reassembling the Digital Unit, arrange the cords as shown in the picture.

The numeral enclosed by a circle in the drawing indicates the order of removal.

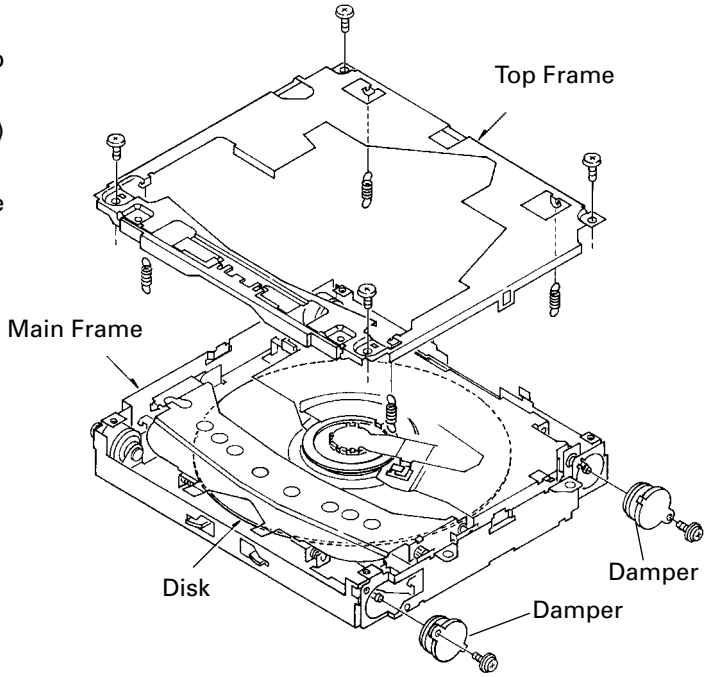


● How to hold the mechanism unit

1. Hold the top frame and main frame.
2. Do not hold the front of the top frame tightly because its strength is low.

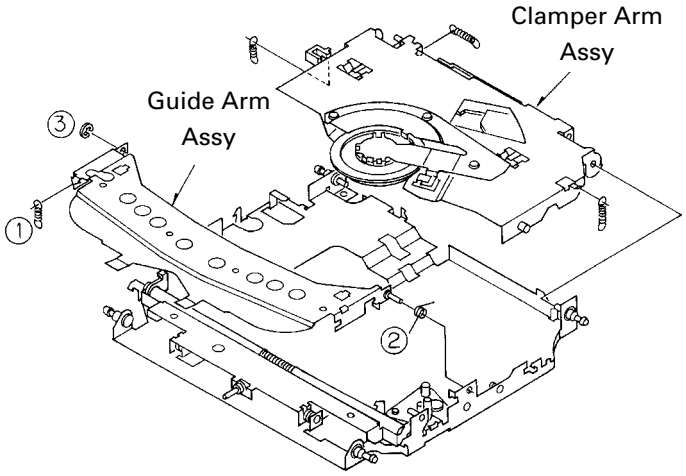
● How to remove the top frame and main frame

1. Remove the screws (4) and screws (2) of the top frame in the clamped state and remove the top frame.
2. After having removed the screws of the dampers (2) on the right and the dampers, remove the main frame.
3. Remount the product connector with the frame removed and eject a disk.



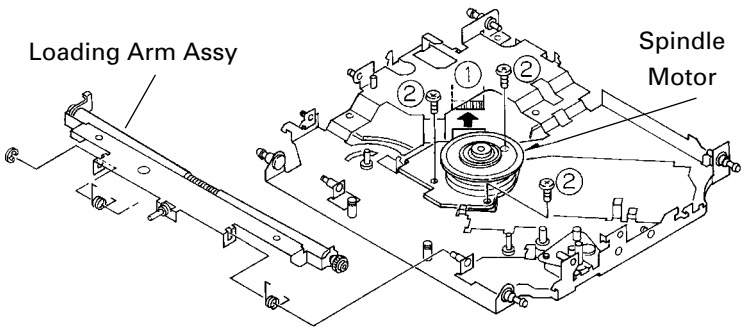
● How to remove the clamper arm assy and guide arm assy

1. Remove a total of three right, left and rear screws and remove the clamper assy.
2. Remove the left spring and remove the torsion spring hook of the right fulcrum unit.
3. Remove the E ring of the left fulcrum and remove the guide arm assy.



● How to remove the loading arm assy and spindle motor

1. Remove the E ring of the left fulcrum and remove the spring and loading arm assy.
2. Remove the connector of the spindle motor and remove the mounting screws (3).



● How to remove the loading motor assy

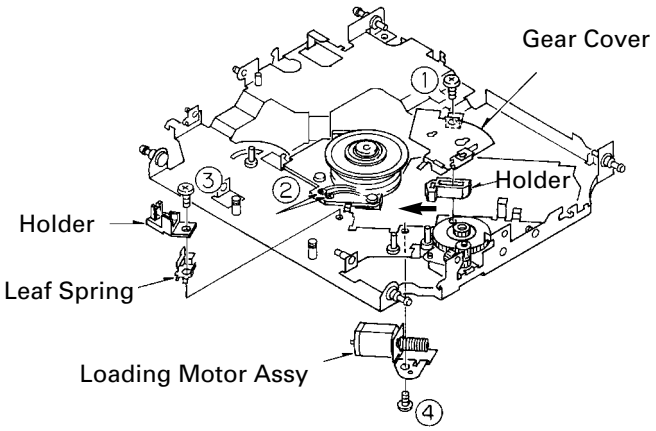
1. Remove the gear cover screw and remove the gear cover.
2. Remove the holder which was tightened together with the gear cover.

(Note):

At assembly, tighten the holder together with the gear cover by approaching the holder to the arrow view direction and touching the tip of the motor shaft.

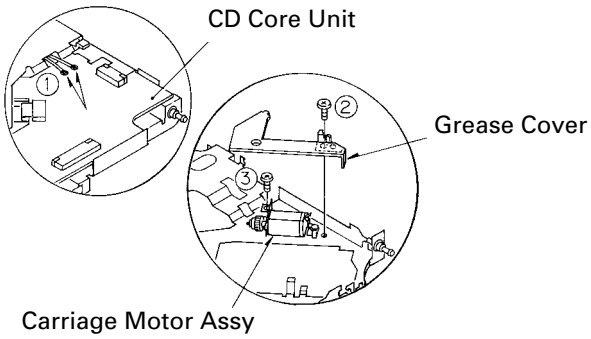
At that time, if the holder is tightened with screws while it is being pressed, the motor load is increased and causes an error (NG). While the holder is approached, separate the hand from the holder and the holder is tightened with the screws.

3. Remove the solder of the motor lead wire.
4. Remove the leaf spring screw and remove the holder and leaf spring.
5. Put the mechanical unit face downward, remove the mounting screws of the loading motor assy and remove the loading motor assy.



● How to remove the carriage motor assy

1. Remove the solder of the carriage motor lead wire.
2. Remove the grease cover screw and remove the grease cover.
3. After having removed the lead wire processing of the motor, remove the mounting screw of the carriage motor assy.



● How to remove the pickup

1. Mount the jumper pin and remove the pickup connector.
2. After having the processing of flexible wires, remove the mounting screw of the main shaft holder and remove the pickup together with the main shaft holder and the main shaft.

IC's marked by * are MOS type.
Be careful in handling them because they are very liable to be damaged by electrostatic induction.

● **Pin Functions(PE5218C)**

Pin No.	Pin Name	I/O	Function and Operation
1-7	D14-8	I/O	Input/output of data bus (bit15 - bit0)
8	VDD		VDD
9	VSS		VSS
10-17	D7-0	I/O	Input/output of data bus (bit15 - bit0)
18	VPP		VPP
19	ATADMARQ	I	ATA: input of DMA request signals
20	RECON	O	Output of controls of switching (record,input/play,out)
21	DEMPH	O	Output of de-emphasis for digital DSP
22	ATRAC3ON	O	Output of controls of switching (ATRAC3/CD-DA&CD-ROM(MP3))
23	PCL	O	Output of pulses for adjusting the clock
24	FSYNC		LC78683E: MP3 frame synchronization signals
25	CRCF	I	Signals to determine Reset of CD mechanism (DSPMUTE)
26	MSARI	I	Input of detection of MS half (detection of reverse insertion)
27	VDD		VDD
28	VSS		VSS
29	ATADMAK	O	ATA: output of DMA acknowledgement signals
30	FWRIN	I	Input of settings of writing mode for self-rewriting of Flash EP-ROM
31	LVL_CH	I	Input of monitoring level of analog input for HDD recordings
32	BDIR1	O	H2CDS: output of direction switching of P-BUS5/3.3V converter IC
33	BDIR0	O	System: output of direction switching of P-BUS5/3.3V converter IC
34	DASP	I	ATA: input of device active signals
35	IORDY	I	ATA: input of IO ready (not used while DMA transfer)
36	BENBL	O	System&H2CDS: output of P-BUS5/3.3V converter IC enable
37	VDD		VDD
38	VSS		VSS
39	BSRQ1	I	H2CDS: input of request for P-BUS serial polling
40	XIRQ	I	CXD1859: input of interrupt request signals
41	MSINT	O/I	CXD1859: input of detection of insertion/extraction
42	ATAINTRQ	I	ATA: input of interrupt request
43	BRST1	O	H2CDS: output of P-BUS reset
44	BRXEN1	I/O	H2CDS: input/output of P-BUS busy
45	BRXEN0	I/O	System: input/output of P-BUS busy
46	TESTIN	I	Input of test mode
47	VDD		VDD
48	VSS		VSS
49	BSRQ0	O	System: output of request for P-BUS serial polling
50	BSENS	I	Input of sensing backup power supply
51	BRST0	I	System: input of P-BUS reset
52	KYDT	I	FL display: input of reception of UART
53	DPDT	O	DSP: output of switching between analog/digital of IC
54	CDCMDCK	O	LC78683E: output of clock
55	CDCMDI	I	LC78683E: input of data
56	CDCMDO	O	LC78683E: output of data

73	TEMP	I	Input of temperature sensing
74	ATAVSENS	I	Input of sensing VD power supply voltage in the ATA section
75	KD5	I	Input of status of DSP initialization
76-80	KD4-0	I	Input from analog keys 5 - 0 → 4 - 0
81	VDD		VDD
82	VSS		VSS
83	MUTE	O	Output of final muting of the analog system
84	CDINTB	I	LC78683E: input of interrupt request signals
85	ATARST	O	ATA: output of device reset signals
86	CDRSTB	O	LC78683E: output of reset
87	CDPW	O	Output of controls of power supply to CD-ROM/MP3 section
88	CDCE	O	LC78683E: output of chip enable
89	ATAPW	O	Output of controls of power supply to the ATA section
90	BMUTE	O	Output of muting for the digital DSP
91	WAIT	O	H2: output sampling rate of signals output from CD mechanism to the DSP microcomputer
92	BCYST	O	H2: output sampling rate of signals output from CD mechanism to the DSP microcomputer
93	CTS	I	FL display: input of CTS
94	RTS	O	Output of operation-demanding triggers to the DSP microcomputer/DAC
95	RD	O	Output of read strobe signals
96	UWR	O	Output of write-enable signals for upper bytes
97	LWR	O	Output of write-enable signals for lower bytes
98	VDD		VDD
99	VSS		VSS
100	MSLOCKIN	I	Input of detection of MS half lock (fully inserted)
101	MODELIN0	I	Input of settings of models
102	IORD	O	ATA: read strobe for DMA flyby transfer
103	CS4(ATA)	O	Chip selection (ATA section)
104	CS3(CXD1859)	O	Chip selection (CXD859 section)
105	IOWR	O	ATA: write strobe for DMA flyby transfer
106	DALMON	O	Output of settings of power saving
107	CS0(SRAM)	O	SRAM chip selection
108	UBE	O	Output of enable signals for upper bytes
109	LBE	O	Output of enable signals for lower bytes
110	FLWRCNT	O	Output of controls of power supply for Flash EP-ROM self-rewriting
111	XPW	O	Output of controls of power supply to CXD1859 section
112	VDD		VDD
113	VSS		VSS
114-115	A25-24	O	Output of address bus (bit18 - bit0)
116	ADCRST	O	Output of controls of resetting the external A/D
117	XLED	O	MS access indicator
118	XRST	O	CXD1859: output of reset
119-123	A20-16	O	Output of address bus (bit18 - bit0)

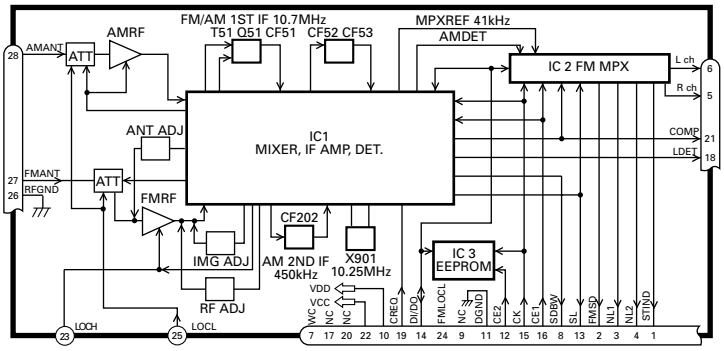
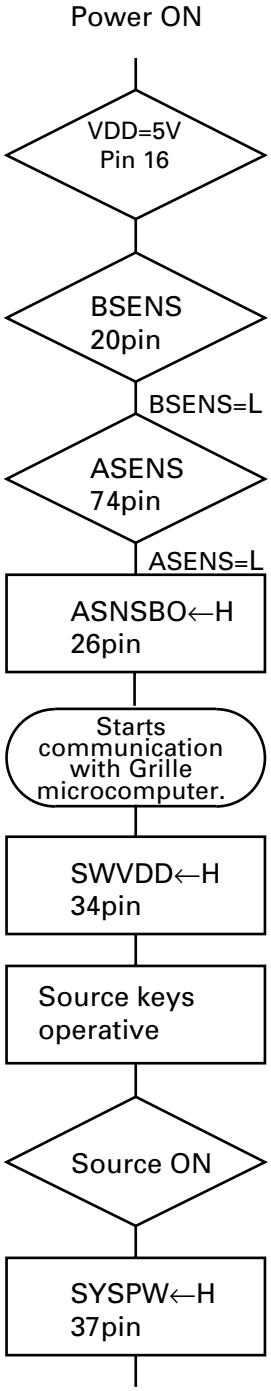
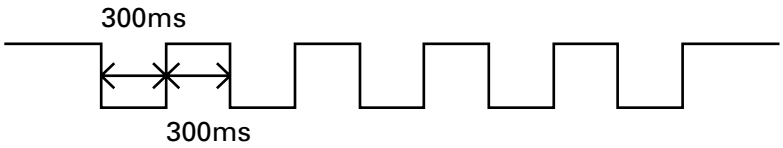
● FM/AM Tuner Unit



No.	Symbol	I/O	Explain	
1	STIND	O	stereo indicator	"Low" when the FM stereo signals are received. To be pulled up to the "VDD" at 47kΩ.
2	FMSD	O	FM station detector	"High" when signals are received. To be pulled up to the "VDD" at 47kΩ Meanwhile, 10kΩ should be used when taking diver FIX trigger from here and "High: 0.9VDD or more" and "Low: 250mV or less". (Should satisfy the diver IC specifications)
3	NL1	O	noise level-1	"High" when noise is received. Output for the RDS. GND at 47kΩ //1,800pF.
4	NL2	O	noise level-2	"High" when noise is received. Output for the RDS. GND at 36kΩ //330pF.
5	Rch	O	R channel output	FM stereo "R-ch" signal output or AM audio output. Add the specified de-emphasis constant.
6	Lch	O	L channel output	FM stereo "L-ch" signal output or AM audio output. Add the specified de-emphasis constant.
7	WC		write control	EEPROM write control. Writing permissible at "Low". Normally open.
8	SDBW	O	SD bandwidth	SD bandwidth signal output. For detection of detuning data for the RDS.
9	NC			Not used
10	VDD		power supply	Power supply pin for the digital section. DC 5V +/- 0.25V. Be careful about overlapping noise in the logic section.
11	DGND		digital ground	Grounding for the digital section.
12	CE2	I	chip enable-2	EEPROM chip enable. Active a "Low" To be pulled up to the "VDD" at 47kΩ
13	SL	I/O	signal level	Received FM/AM signal level (strength) output. Connect the specified load resistor and capacitor (10k Ω + 39k Ω //4,700pF)
14	DI/DO	I/O	data input/ data output	Data input/Data output To be pulled up to the "VDD" at 47kΩ
15	CK	I	clock	Clock input To be pulled up to the "VDD" at 47kΩ
16	CE1	I	chip enable-1	AF·RF chip enable. Active at "High" To be grounded at 47kΩ
17	NC			Not used
18	LDET	O	lock detector	Active at "Low". To be pulled up to the "VDD" at 47kΩ
19	CREQ	I	current request	Active at "Low". To be grounded at 47kΩ
20	NC			Not used
21	COMP	O	composite signal	FM composite signal output. r out < 100Ω
22	VCC		power supply	Analog section power supply pin.DC 8.4V +/- 0.3V
23	LOCH	I	local high	FM local high pin. When seeking local high, apply 5V together with "LOCL".
24	FMLOCL	I	FM local low	FM local low pin. When seeking local low, apply 5V to the base of the NPN transistor with which the specified resistor is being connected to the emitter. Keep it open in case of ordinary marketed models.
25	LOCL	I	local low	FM/AM local low pin. When seeking local low, apply 5V to the base of the NPN transistor. Since this pin is exclusive for AM when the FMLOCL is in use, do not drive it under FM.
26	RFGND		RF ground	Grounding for the antenna section.
27	FMANT	I	FM antenna input	FM antenna input. 75Ω. Surge absorber (DSP-201M-S00B) is necessary.
28	AMANT	I	AM antenna input	AM antenna input. High impedance. Connect to the antenna through an L (LAU type) of 4.7μH.To cope with the power transmission line hums, insert a series circuit consisting of an L (a coil of about 100mH) + R (a resistor of 470 Ω to 2.2kΩ) between the GND.

7.3 OPERATIONAL FLOW CHART





In case of the above signal, the communication with Grille microcomputer may fail.
If the time interval is not 300msec, the oscillator may be defective.

Completes power-on operation.
(After that, proceed to each source operation)

7.4 CLEANING

Before shipping out the product, be sure to clean the following portions by using the prescribed cleaning tools:

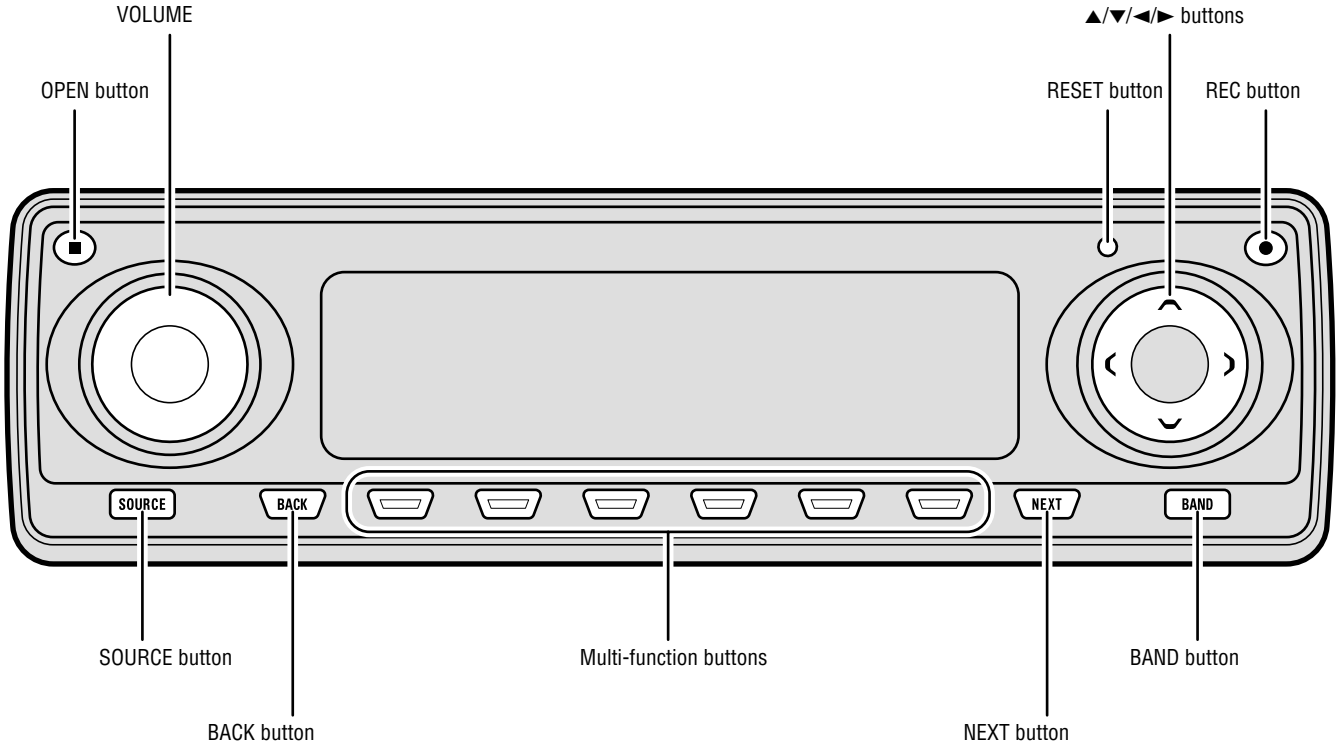
Portions to be cleaned	Cleaning tools
CD pickup lenses	Cleaning liquid : GEM1004 Cleaning paper : GED-008

Portions to be cleaned	Cleaning tools
Fans	Cleaning paper : GED-008

8. OPERATIONS AND SPECIFICATIONS

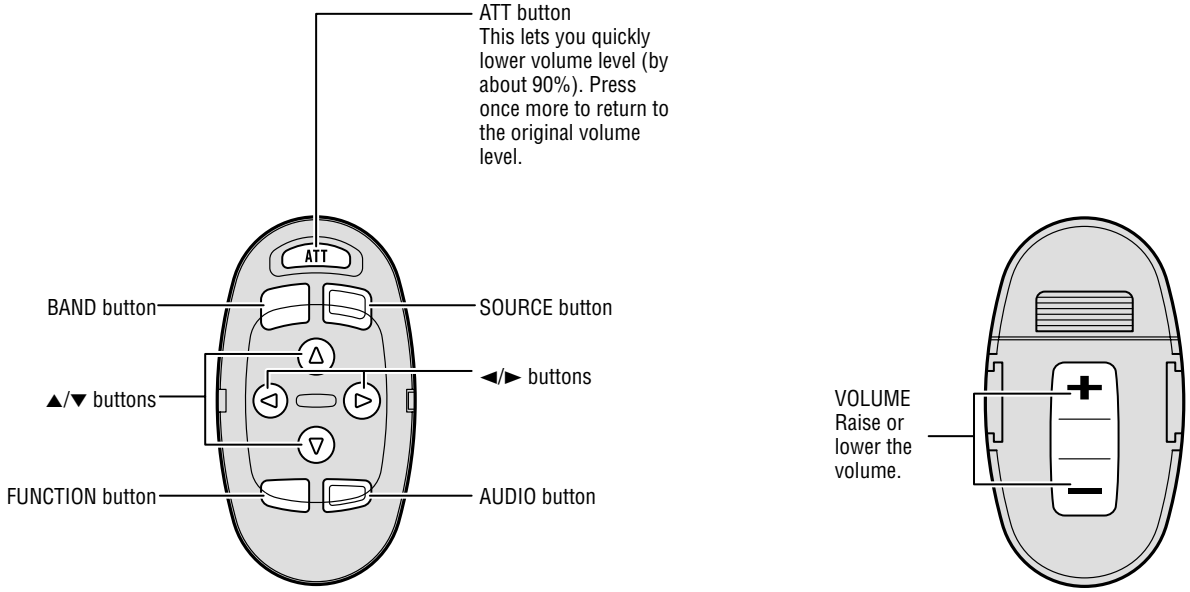
8.1 OPERATIONS

Head unit



Steering remote controller

A steering remote controller that enables remote operation of the head unit is supplied. Operation is the same as when using buttons on the head unit.



Turning a source on or off

You can select the source you want to listen to. To switch to built-in CD player, load a CD in this product. To switch to a "Memory Stick" player, load a "Memory Stick" in this product.

1. **Press SOURCE to select the desired source (e.g., tuner).**

   Press SOURCE repeatedly to switch between the following sources:
   Built-in CD player (MP3) → TV tuner → Tuner → DAB tuner → Music server → "Memory Stick" player → Multi-CD player → External unit 1 → External unit 2 → AUX

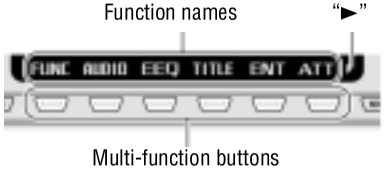
2. **Press VOLUME to extend the VOLUME outward.**
   - When you press VOLUME, it extends outward so that it becomes easier to turn. To retract VOLUME, press it again.
3. **Turn VOLUME to adjust the volume.**

4. **Press and hold SOURCE to turn the source off.**

Note:
- External unit refers to a Pioneer product (such as one available in the future) that, although incompatible as a source, enables control of basic functions by this product. Two external units can be controlled by this product, although "External" is displayed whether you select external unit 1 or external unit 2. When two external units are connected, the allocation of them to external unit 1 or external unit 2 is automatically set by this product.
- In the following cases, the sound source will not change:
  * When no product corresponding to the source is connected to this product.
  * No disc is set in this product.
  * No "Memory Stick" is set in this product.
  * No magazine is set in the multi-CD player.
  * AUX (auxiliary setting) is set to off.
- When this product's blue/white lead is connected to the car's auto-antenna relay control terminal, the car's auto-antenna extends when this product's source is switched on. To retract the antenna, switch the source off.

SOFT KEY operation

SOFT KEY operation means that the function of a button changes as indicated on the display. The multi-function buttons provide SOFT KEY operation; the functions performed by the buttons change according to the function or setting that has been selected.



The explanations given in this manual are based on FORM 1 display. If you have selected FORM 2, the functions of some of the multi-function buttons may be different from those indicated in the manual.

Important

In this manual, for operations using the multi-function buttons the function displayed is used as the name of the function button.

Switching the function of the multi-function buttons

The "►" indicator shows that the multi-function buttons have functions other than those currently displayed. When this indicator is visible, press NEXT to switch through the functions of the multi-function buttons.

- **Press NEXT to display the desired functions (e.g., built-in CD player).**

  Press NEXT repeatedly to switch between the following functions:

Note:
- The number of functions or displays switched through will differ according to the source or menu selected.
- When no function is indicated for a button, that button is not currently active.

Example of multi-function button operation

Here the "random play" function of the built-in CD player is used as an example to illustrate operation of the multi-function buttons.

1. **Press NEXT to display "FUNC".**

   Press NEXT repeatedly until "FUNC" appears.

2. **Press FUNC to enter the function menu.**

   With the switch to the function menu, the functions of the multi-function buttons also change simultaneously.

3. **Press RDM to select the random mode.**

4. **Press RDM to turn random play on.**

The light illuminates.

   - Press RDM again to turn random play off. The light goes off.
5. **Press BACK to exit the function menu.**

   When the function menu is exited, the functions of the multi-function buttons also change simultaneously.

Note:
- You can also turn random play on or off by pressing ▲ or ▼ in the random mode.
- If you do not operate the function within about 30 seconds, the display is automatically returned.

The difference between the BAND button and the BACK button

BAND button

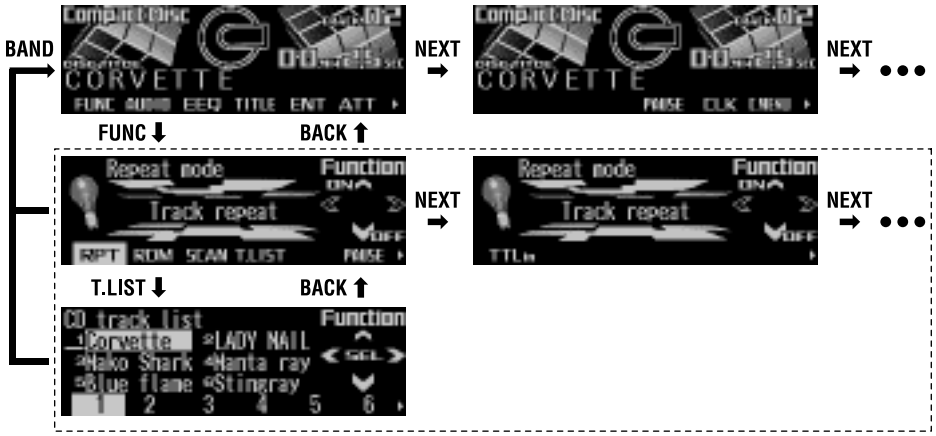
Pressing the BAND button immediately cancels the current menu or mode, and returns to the basic displays.

Note:
- When the source is the Tuner, TV tuner or DAB tuner and no menu or mode is selected, pressing the BAND button has the effect of switching bands.

BACK button

Pressing the BACK button cancels the current menu or mode and returns to the previously selected menu or mode.

Display example (e.g., built-in CD player)



Key guidance indicator

This product's display features key guidance indicators. These light to indicate which of the ▲/▼/◄/► buttons you can use. When you're in the function menu, audio menu or the other menus, they also make it easy to see which ▲/▼/◄/► buttons you can use to switch functions on/off, switch repeat selections and perform other operations.

Key guidance indicators

Note:

- In this manual, operation for each mode is given mainly in terms of the multi-function buttons. However, in each mode, when the key guidance indicators are lit it is also possible to use ▲/▼/◄/► to operate the mode.
